FÁBIO OLIVEIRA, MSc

Oracle Database & AI Solutions Architect | Enterprise AI-Enabled Data Platforms & LLM Integration

Oracle ACE Associate · Legacy-to-AI Modernization · Multi-Cloud · Portuguese (EU) & Brazilian citizen

oliveirafv@gmail.com • linkedin.com/in/fabio-oliveira-ai • Rio Grande do Sul, Brazil — open to EU / US / remote

PROFESSIONAL SUMMARY

Oracle Database Architect with 20+ years across international enterprise projects, now focused on making corporate data usable by AI. I work at the seam between two worlds: the legacy Oracle estates where an organization's most valuable data actually lives, and the LLM systems that need governed, auditable access to it. Portuguese (EU) and Brazilian citizenship means no sponsorship is required for roles in the European Union.

This sits on production-grade discipline: zero-downtime migrations, database cloning beyond 200 TB, and 24/7 SLA-driven operations in regulated environments (PCI-DSS, SOX, ISO 27001) — the reliability engineering that AI ecosystems inherit and depend on.

AREAS OF EXPERTISE

- **AI-Ready Data Infrastructure & Governed Access —** Model Context Protocol (MCP), Oracle REST Data Services (ORDS), Oracle AI Vector Search (23ai/26ai), PostgreSQL pgvector, MongoDB Vector Search; grounding, safety guardrails and evaluation gates for enterprise LLM workloads.
- **Oracle Core & Engineered Systems —** Database 7 through 26ai, RAC, Data Guard, GoldenGate, ASM, RMAN; Exadata, Exalogic, ZFS Storage Appliance, Big Data Appliance, ODA, ZDLRA.
- **Automation & Infrastructure as Code —** Ansible (reusable roles, playbooks, dynamic inventory, Vault-backed secrets), Python, Shell, PL/SQL; DataOps and lifecycle automation across large estates.
- **Legacy Modernization & Migration —** zero-downtime migration and upgrade strategies; cross-platform moves (Linux, AIX, Solaris, HP-UX, Windows); hybrid and multi-cloud target architectures on OCI, Azure, GCP, AWS and Huawei Cloud.
- **Resilience, Governance & Security —** HA/DR architecture (RAC, Data Guard, RMAN, Oracle MAA); Oracle Label Security, TDE, VPD, Oracle Advanced Security; PCI-DSS, SOX, ISO 27001.
- **Multi-Engine Data Platforms —** Oracle, PostgreSQL, MySQL, MongoDB, Sybase; performance engineering for OLTP, analytical and AI workloads.

PROFESSIONAL EXPERIENCE

Timestamp June 2012 – Present

Oracle Database & AI Solutions Architect Lisbon, Portugal

- **Led the database and infrastructure workstream of a four-generation Oracle modernization (7 → 9i → 11g → 19c)** across 15 two-node RAC clusters and 55+ pluggable databases. Automated target provisioning with Ansible and designed a reusable metadata PDB as the delivery unit, **cutting environment delivery from two weeks to under four hours (~95%); contract renewed at close.**
- **Design and operate a production GenAI enablement platform** letting an enterprise customer run its own LLM engine against production-grade Oracle data: an MCP server on Oracle REST Data Services (ORDS) **grounding** the model in 4 curated schemas (~40 tables), access scoped by connection origin, with Oracle Label Security and custom PL/SQL anonymization as **safety guardrails**. Scheduler-driven refreshable clone PDBs rebuild the 19c QA estate nightly (50 GB, <10 min) with **no data on developer workstations**; every AI use case clears a mandatory real-load QA gate as the **evaluation** step before production.
- **Automated the full database lifecycle across 500+ Oracle instances** — provisioning, patching, upgrades, backup/restore, health checks and failover — for business-critical platforms including BAM, TIBCO, Siebel, Flexcube and OBIEE, **sustaining 99.95% availability under 24/7 SLAs spanning 12 enterprise contracts.**
- **Design HA/DR architectures** with Oracle RAC, Data Guard, GoldenGate, RMAN and ASM, delivering zero-downtime upgrades and cross-platform and cloud migrations (Linux, AIX, Solaris, HP-UX, Windows) **with no unplanned downtime or data loss, including RMAN cloning of individual databases exceeding 200 TB.**
- **Built and maintain an Ansible automation framework** for large Oracle estates — reusable roles, playbooks, dynamic inventory and Vault-backed secrets, executed from a hardened bastion against production and homologation — **standardizing 50+ recurring routines and cutting manual executions from 1,000 to 100 (90%).**
- **Lead upgrades, patching, performance analysis, risk assessment and production change management**, supporting PCI-DSS and SOX through TDE, VPD and Oracle Advanced Security **across three consecutive annual audit cycles.**

Core stack: Oracle Database 7–26ai · RAC · Data Guard · GoldenGate · Exadata · RMAN · ASM · ORDS · MCP · Oracle Label Security · OCI · Azure · GCP · AWS · Huawei Cloud · PostgreSQL · MongoDB · Python · n8n · Ansible · Linux

GetNet Tecnologia December 2010 – June 2012

Senior Oracle Database Administrator Campo Bom, Brazil

- Safeguarded mission-critical payment-processing data infrastructure in a fintech environment governed by ISO 27001 and PCI-DSS — administering, patching, upgrading and troubleshooting Oracle 9i/10g/11g Single Instance and RAC estates supporting 24/7 production systems.
- Architected data resilience and availability: enterprise backup, recovery and replication with RMAN, Data Guard, GoldenGate, Streams and HP Data Protector; block-, tablespace- and datafile-level recovery; retention policies and historical-data strategies; fully documented and tested DR lifecycle.
- Modernized the database estate: executed Oracle 10g → 11gR2 migrations, upgrades and patching; drove performance investigation across application and database layers with OEM and Nagios; administered Sybase ASE and Replication Server alongside the Oracle core.

Core stack: Oracle RAC · Data Guard · GoldenGate · Streams · RMAN · Sybase ASE · OEM · Nagios · Linux · Bash · PL/SQL

BEG Support February 2008 – December 2010

Oracle Database Administrator São Leopoldo, Brazil

- Built deep foundations in enterprise data infrastructure: installed, configured and managed Oracle 9i/10g/11g Single Instance and RAC environments across production and development, owning patching, upgrades, troubleshooting and performance monitoring.
- Engineered backup and recovery strategies with RMAN — cold/hot backups, retention policies, block/tablespace/datafile recovery — and supported DR design, documentation, planning, testing and execution.
- Automated and virtualized operations: standardized operational activities with Bash on Linux/Unix, monitored with OEM, Nagios and Zabbix, ran virtualization with OracleVM, and deployed Oracle APEX and the infrastructure for Compiere ERP.

Core stack: Oracle RAC · RMAN · OEM · Nagios · Zabbix · OracleVM · Linux · Unix · Bash · PL/SQL

EDUCATION

MSc, Computer Engineering — ISCTE, Instituto Universitário de Lisboa 2015 – 2017

BSc, Information Systems — Centro Universitário Feevale 2006 – 2010

SELECTED CERTIFICATIONS

- **Oracle AI Vector Search Certified Professional** (2025) — embeddings, vector indexes, similarity search, RAG applications
- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional** (2026)
- **Oracle Certified Professional, Oracle Database 19c: RAC, ASM and Grid Infrastructure Administrator** (2025)
- **Oracle Cloud Infrastructure 2025 Certified Architect Associate** (2025)
- **Oracle Database Administration 2019 Certified Professional (OCP) · Oracle Certified Expert, Oracle Database 12c: Data Guard Administrator**
- **Oracle GoldenGate 12c** and **Oracle Exadata Database Machine and Cloud Service 2017** Certified Implementation Specialist
- **Microsoft Certified: Azure Administrator Associate · CCP — Certificado de Competências Pedagógicas** (certified trainer)

COMMUNITY & LANGUAGES

- **Oracle ACE Associate** — technical content author on Oracle, AI and data infrastructure (Oracle4us blog, LinkedIn); database and Linux instructor.
- **Languages** — Portuguese (native), English (full professional), Spanish (limited working).
